                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a RT46B.1 xynB gene and encodes a xylanse enzyme. The present sequence is derived from a gene contained within blictyoglomus thermophilum strain Rt46B.1. The xylanase is contained within the family of enzymes known as G-Xylanases, and has beta -1,4-xylanase activity. The enzyme has high activity and high thermal stability with optimum activity at 85 degrees Celcius and ph 6.5. The xylanase enzyme is used for the biological bleaching of cellulose products, especially paper pulp. Use of the enzyme ensures that waste streams from the biological bleaching will include less toxic material
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        143

                                                                                                                                                                    The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (S1), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for dough conditioning; beverage production; as a nutritional supplement in animal feed; reducing lighin in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic amplification of a template mathing a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis. This sequence encodes xylanase protein isolated from an environmental sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     333
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      399

| Sequence 5, Application US/08470953A
| Patent No. 6346407
| GENERAL INCPARATION:
| APPLICANT: PIERE LEBOUX
| APPLICANT: RENE DETOUX
| APPLICANT: RENE DETOUX
| TITLE OF INVENTION: Xylanase, microorganisms produced it,
| TITLE OF INVENTION: DNA molecule, processes for preparation of this xylanase
| TITLE OF INVENTION: and uses thereof
| TITLE OF INVENTION: ADDRESS:
| NUMBER OF SEQUENCES: 29
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: WILLIAN BRINKE UNITED TO THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE

GENERAL INFORMATION:
APPLICANT: ANDREE LAHAYE
APPLICANT: RELC DE BUYL
APPLICANT: PIERRE LEDOUX
ITLE OF INVENTION: Xylanase, microorganisms produced it,
TITLE OF INVENTION: DNA molecule, processes for preparation of this xylanase;
TITLE OF INVENTION: and uses thereof
NUMBER OF SEQUENCES: 29

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    541 AGTGGCACGATTTCTGTCAGCAACCACTTTAGAGCGTGGGAAAACTTAGGGATGAATATG 600

Sequence 2, Application US/08470953A
Patent No. 6346407
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: ENTE DE BUYL
APPLICANT: PIERRE LEDOUX
APPLICANT: PIERRE LEDOUX
APPLICANT: PIERRE LEDOUX
APPLICANT: PIERRE LEDOUX
APPLICANT: PIERRE LEDOUX
APPLICANT: PIERRE LEDOUX
APPLICANT: RENE DETROZ
TITLE OF INVENTION: DNA molecule, processes for preparation of this xylanase;
TITLE OF INVENTION: and uses thereof
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS:
ADDRESSES: WILLIAN BRINKS HOFER GILSON & LIONE
STREET: 2000 K St., N.W., Suite 200
                                                                                                                                                                                                                                                                                                                       621
                                                                                                                                     CTTACTGTAGAAGGCTATCAAAGTAGCGGAAGTGCTAATGTATATAGCAATACACTAAGA 681

RNA prepared and library constructed by W. Walter Lorenz, School of

Foreerry, University of Georgia; plant material prepared at the

Foreerry, Florida; sequencing done in the Laboratory for

Genomics and Bioinformatics, University of Georgia. Sequence ends

have been trimmed to exclude vector and regions below Phred quality

16. Three-prime sequences are presented as their reverse complement

and have been trimmed to exclude polyA.

Seq primer: JENREY (CAGGAAACAGCTATGACC).

/clone lib="Oxidatively-stressed leaves and roots"
/note="Organ: Leaf and Root; Vector: pME188-FL3; Site_1:
Xhoi; Site_2: Xhoi; The library was prepared from polyA+RNA from oxidatively stressed, hydroponically grown sorghum seedlings. At 8 days of age, growth medium was supplemented with hydrogen peroxide to 0.003% and leaves were misted with 10 um methyl viologen. Leaves and roots were harvested at 3, 12 and 27 hr after treatment and all tissue pooled. Double-stranded cDNA was cloned unidirectionally into different DraIII sites of the pME188-FL3 vector (5-prime DraIII site is CACTGTGTG, 3-prime DraIII site is CACTGTGTG, insert."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CN133022 772 bp mRNA linear EST 01-APR-2004 OX1 9 D10.gl A002 Oxidatively-stressed leaves and roots Sorghum bicolor cDNA clone OX1_9_D10_A002 5', mRNA sequence.
